**Process Control System (PCS)**

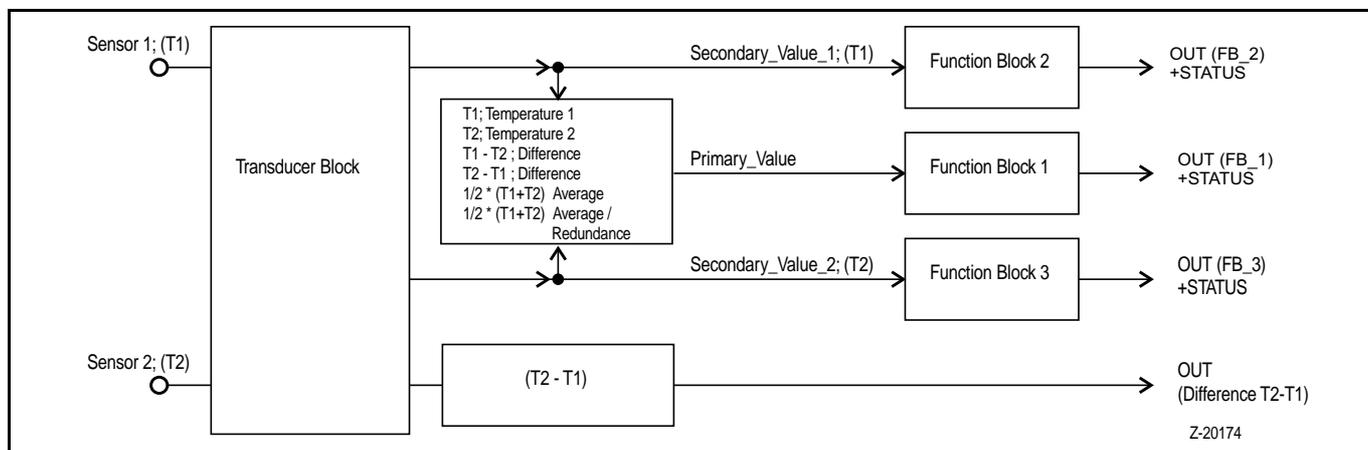

A cyclic communication can be established with all Profibus compatible PCSs. Acyclic communication requires a Master CI. 2, the communication may be established on the basis of the generic slave (to be in acc. to Profile 3.0; only standard parameters) or a TF 12 specific driver. Those drivers are available for following PCSs:

- Freelance 2000 (template)
- Symphony (Composer via DTM)
- Siemens (via PDM; in preparation)

**Configuration-tools**

- SMART VISION 4.0 (DTM; acyclic service)
- Quick Set (local parameter setting)

**Block diagram**

**Configurator/Display (optional)**

**Quickset** (in preparation)

Local configurator and display.

The unit is supplied by the associated transmitter. The integrated rotation mechanism of the QuickSet allows the adjustment to the individual application. The intrinsically safe approval of QuickSet (in preparation) allows the hot plugging of the unit within the hazardous zones.

**Parameter setting**

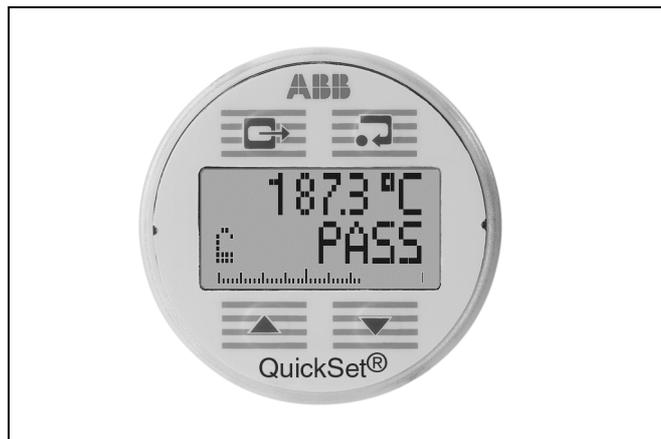

- Bus address
- Connected sensor

**Copy functionality**

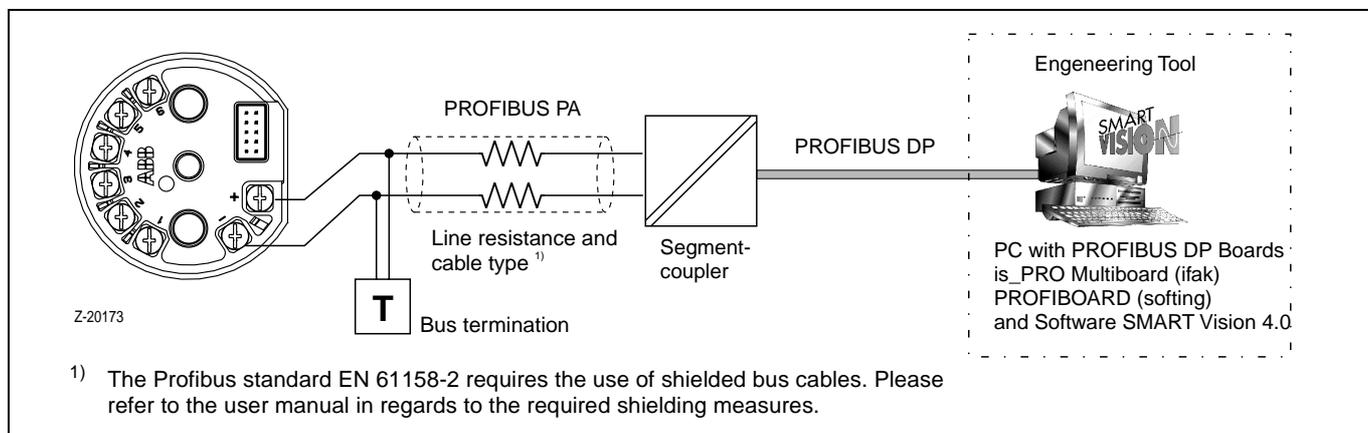

The QuickSet provides an EEPROM for the backup of the configuration data of the associated transmitter. Furthermore, the configuration data can be copied to other transmitter (only TF 12).

**Display functionality**

- Indication of process variables
- Indication of diagnostic messages
- Indication of the current configuration
- Trend-indication via bargraph
